

Solvency and Financial Condition Report (SFCR)

December 2022

Statement of Directors' responsibilities in respect of the Solvency and Financial Condition Report ("SFCR")

The Directors are responsible for ensuring the SFCR has been properly prepared in all material respects in accordance with the Malta Financial Services Authority ("the MFSA") rules and Solvency II Regulations.

The Directors are required to ensure that the Company has a written policy in place (Reporting and Disclosure Policy) to ensure the ongoing appropriateness of any information disclosed and the MFSA expects that the Directors should be satisfied that:

- a. throughout the financial year, the Company has complied in all material respects with the requirements of the MFSA rules and Solvency II Regulations as applicable to the Company; and
- b. it is reasonable to believe that, at the date of the publication of the SFCR, the Company has continued so to comply, and will continue to comply in future.

The SFCR was approved by the Board of Directors on 05 April 2023 and was signed on its behalf by:

Michael Gatt

EXECUTIVE SUMMARY

- Business and Performance: IVALIFE Insurance Company ('IVALIFE', the 'Company') is a
 limited liability company incorporated in Malta on 24 December 2019. The Company was
 authorised by the Malta Financial Services Authority to transact long term business of
 insurance on 01 February 2021 and commenced its operations 01 March 2021. The
 Company offers a range of products both on individual and group basis, including level
 and decreasing term insurance policies and regular and single premium with-profits
 policies.
- System of Governance: To meet the requirements set out in the MFSA Insurance Rules the Company has an established system of governance in place. This includes a Board of Directors comprising of both non-executive directors and independent non-executive directors as well as three Board Committees, which contribute to the sound and prudent management of the Company. The Company's system of governance fulfils the requirements of Directive 2009/138/EC (Solvency II).
- Risk Profile: The Company's overall risk profile is determined by the characteristics of its asset portfolio and the nature of its insurance business. Life business is geared towards long term savings products, with protection cover being an important element for parts of the portfolio. The most predominant quantifiable risks at this point are Life Underwriting, Market, Operational and Counterparty default risks while the most predominant non-quantifiable risks are Strategic and Reputational.
- Valuation for Solvency Purposes: As at the 31 December 2022, the Solvency Capital Requirements stood at 195% whilst the Minimum Capital Requirements stood at 189%.
- Capital Management: As at December 31, 2022, the Company meets the capital requirements as outlined in Directive 2009/138/EC (Solvency II).

The purpose of the Solvency and Financial Condition Report (SFCR) is to satisfy the public disclosure requirements under the Article 290 of the EU Delegated Regulation 2015/35. The elements of the disclosure relate to business performance, governance, risk profile, valuation of solvency purposes and capital management. The SFCR has been prepared with reference date 31 December 2022.

1. BUSINESS AND PERFORMANCE

OVERVIEW

IVALIFE Insurance Company ('IVALIFE', the 'Company') is a limited liability company incorporated in Malta on 24 December 2019. The Company was authorised by the Malta Financial Services Authority to transact long term business of insurance on 01 February 2021 and commenced its operations 01 March 2021. The Company offers a range of products both on individual and group basis, including level and decreasing term insurance policies and regular and single premium with-profits policies. The Company continued to operate in a challenging environment as although the COVID-19 restrictions were gradually removed, the Russian-Ukraine war created further economic downturns. Nevertheless, the insurance portfolio of IVALIFE continued to show steady expansion, which is an indicator that IVALIFE continues to have customers' trust.

The product offerings for the year under review included the IVAsecure level term, IVAprotect decreasing term, IVAsave with profits regular premium savings plan, IVAinvest with profits single premium savings plan and Group protection.

The Company reported a loss after tax for the year ended 31 December 2022 of $\[\in \]$ 1.62m (2021: $\[\in \]$ 0.99m). The gross premium written for the financial year amounted to $\[\in \]$ 8.71m (2021: $\[\in \]$ 5.21m), $\[\in \]$ 6.48m (2021: $\[\in \]$ 4.35m) of which were single premium and the $\[\in \]$ 2.23m (2021: $\[\in \]$ 0.86m) comprised individual and group protection and regular savings plans. The claims incurred; net of reinsurance amounted to $\[\in \]$ 75.6k. The reported loss on the technical account amounted to $\[\in \]$ 2.50m. The Company's efforts throughout the year remained focused on creating brand awareness, widening the product offerings, onboarding additional distributors as well as engaging the necessary expertise thus enhancing the management structure to allow for the business operation going forward.

The total assets increased by €7.58m, from €11.63m at end of year 2021 to €19.21m as at end of 2022. The increase includes a €2m capital injection made by the shareholders. The gross technical provisions as at year end, including both insurance contracts and investment contracts with discretionary participation features totalled €11.82m (2021: €4.87m). The Company's shareholders' funds at the close of 2022 amounted to €6.27m (2021: €5.90m).

BUSINESS PROFILE

1.1.1 Name and legal form of undertakings

IVALIFE Insurance Limited is authorised and regulated by the Malta Financial Services Authority to carry out long term business of insurance under the Insurance Business Act (Chapter 403 of the Laws of Malta) with company registration number C 94404.

IVALIFE is equally owned by four leading companies primarily operating in the financial services industry, namely APS Bank p.l.c., Atlas Insurance PCC Limited, GasanMamo Insurance Ltd. and MaltaPost p.l.c.

Its registered address is IVALIFE Insurance Limited, Gaba Building, Level 2, Naxxar Road, Iklin IKL 9026.

1.1.2 Supervisory authority

IVALIFE is authorised and regulated by the Malta Financial Services Authority of Triq L-Imdina, Zone 1, Central Business District, Birkirkara CBD1010 Malta.

1.1.3 Name and contact details of the external auditor

The Company's external auditors for the financial year ended 31 December 2022 are PricewaterhouseCoopers with registered address 78 Mill Street, Zone 5, Central Business District, Qormi CBD 5090, Malta

1.1.4 Material lines of business and material geographical areas where the company carries out business

IVALIFE is authorised to carry on long-term business of insurance under the Insurance Business Act (Chapter 403 of the Laws of Malta) in respect of commitments where Malta is the country of commitment. The Company provides a range of products both on individual and group basis, including level and decreasing term insurance policies and regular and single premium withprofits policies.

Provisions						
Gross	6,657	4,470	296	395	6,952	4,865
Reinsurers' share			(76)	(70)	(76)	(70)
Net	6,657	4,470	220	325	6,876	4,795

The Company registered an increase in business when comparing YE 2022 and YE 2021. It should be further noted that YE 2022 represents 12 months of business whilst 2021 represents solely 9 months of business as the Company started writing business in April 2021.

1.1.6 Investment Performance

The Company has recognised the following net investment income for the year ended 31 December 2022.

	Investment Performance	
	YE 2022 (€'000)	YE 2021 (€'000)
Investment income	151	56
Investment charges	(89)	(31)
Net fair value gain / (loss) on financial assets at fair value through profit and loss	(1,165)	31
Net realised gain / (loss) on disposal on financial assets at fair value through profit and loss	(206)	(16)

1.1.7 Income and expenses arising from investments by asset classes

The assets invested by the Company (own funds and policyholder funds) fall in the following asset classes:

	Market Value	Net Investment Return
	YE 2022 (€'000)	YE 2022 (€'000)
Equities	903	(52)
Debt Securities	7,235	(456)
Collective Investment Schemes	5,090	(800)

1.1.8 Any Other Information

1.1.8.1 Russian – Ukrainian War

The Russian – Ukraine conflict that started on the 24 of February 2022 has magnified uncertainty in all economic sectors including financial services and insurance.

The Company continues to actively monitor the developments and assess the impact of the sanctions currently being imposed. IVALIFE has an insignificant level of exposure to Russian policyholders and does not have any asset exposures to Russia/Ukraine. As a result, there is no direct impact on the business performance. Nonetheless, the conflict itself created instability within the international financial market which has had an indirect impact on the value of the Company's underlying investments. More importantly the Maltese economy has limited dependency on Russian investors and therefore it is not anticipated that there will be any material deterioration in the broader business environment in which IVALIFE operates.

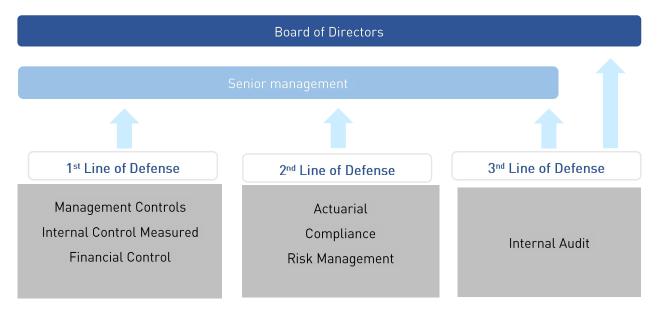

2. SYSTEM OF GOVERNANCE

INTRODUCTION

The Company has in place a system of governance which aims to provide sound and prudent management of the business. The Company's governance includes a transparent organisational structure with a clear allocation of responsibilities and appropriate segregation of duties.

GENERAL INFOMRATION ON THE SYSTEM OF GOVERNNACE

The corporate governance framework for the management of risks within the Company is based on the "Three lines of defence model". The three lines of defence model supports the implementation of a robust internal control system and is aligned with the 'four-eye principle'. In practice, there is sufficient control and challenge at all levels of the organisation.

The First Line of Defence relates to the management of risks at the points where they arise. These activities are carried out by persons who take on risks on behalf of the Company. Risk management at this level consists of appropriate checks and controls, incorporated in the relevant procedures and the guidelines that are set by the Senior Management with the assistance of the RMF.

The Second Line of Defence concerns the risk management activities that are carried out by the RMF and the important supporting operations. Specifically, the RMF is responsible for the preparation, maintenance, and periodic review, as well as for the continuous monitoring of compliance with the Company's policies and procedures. It also refers to the risk management activities performed by the Board committees and includes the approval and oversight of the implementation of policies and the establishment of systems and controls so that the overall level of risks and the relationship between risk and reward remain within acceptable levels. The Actuarial Function in its advisory capacity provides technical expertise to both the 1st and 2nd Line of defence.

The Third line of Defence concerns the activities of Internal Audit that through its work provides an independent assurance to the BoD, on the performance and effectiveness of the risk management systems within the Company. The Internal Audit conducts regular internal audits of the procedures applied for managing all types of risks and their effectiveness, the results of these audits are summarised in reports submitted to the BoD, through the Audit and Risk Committee, and to the Senior Management.

The overall oversight of the risk management activities is performed at BoD level (i.e., the approval of the strategic management of risk and capital), by which the risk definitions, risk profile and risk appetite are ratified. The BoD is responsible for ensuring that the implemented risk management framework is suitable, effective, and proportionate to the nature, scale, and complexity of the risks inherent in the business. The BoD is also responsible for the approval of any periodic revision of the main strategies and business policies of the Company in terms of risk management.

2.1.1 Roles and responsibilities of the Board, Senior Management, and key functions

2.1.1.1 Board of Directors (BoD)

The Company's ultimate supervisory body is the Board of Directors. The Board maintains overall responsibility for the management of the Company, including ultimate oversight of the Company's operations. The composition and resourcing of the BoD reflects the range of skills, knowledge, and experience necessary for the BoD to be effective.

The Board is comprised of 6 members, 2 of who are Independent Non-Executive Directors.

The Company's BoD monitors the performance of Senior Management and gives guidance and advice, where appropriate. As part of performing its oversight function, the BoD reviews and discusses reports submitted by Senior Management and internal control functions regularly and it maintains active and open communication with the Chief Executive Officer and Senior Management.

In general, the BoD is responsible for the following:

- Setting the strategy, tone, culture, and values of the Company.
- Establishing the Company's internal control and risk management systems and monitoring their implementation and effectiveness.
- Overseeing Senior Management and establishing sound business practices and strategic planning.
- Setting the Company's risk appetite and risk tolerance limits at a level which is proportionate with the strategic goals of the Company and the nature, scope, and complexity of its activities.
- Defining and approving the Company's policies and procedures to ensure its sound operation and compliance with regulatory requirements, taking appropriate measures to address any deficiencies.

Board Committees

To assist it in discharging its obligations, and considering the principle of proportionality, the Board has set up three Board Committees:

- The Asset Liability Investment Advisory Committee was established in 2021 and is responsible for the Investment Management Function of the Company and to exercise the powers delegated to it by the Board.
- The Audit Committee, established in 2021, ensures that the Company has in place an adequate internal control system and oversees the operations.
- The Risk Committee, established in 2022, is responsible for the supervision of the Company's risk management framework.

Matters not reserved to the BoD are delegated to the Board Committees. However, delegation does not release the BoD from collectively discharging its duties and responsibilities. In all instances, the Board Committees shall compromise of at least 3 members. The Board Committees are fully operational and meet at least four times annually. The terms of reference of the Committees setting out the composition, meeting requirements, responsibilities and authority are approved by the BoD.

2.1.1.2 Executive Committee

The Company has established an Executive Committee which is responsible for the implementation of the business plan and risk management strategy set by the Board. It holds monthly meetings for the purpose of coordination, review, discussion, and approval on key issues relating to its responsibilities.

The Executive Committee is comprised of 4 members forming part of the Company and is chaired by the Chief Executive Officer.

The Chief Executive Officer has the overall responsibility and oversight for all the business operations of the Company and is supported in his role by the aforesaid executive committee members. Committee members have a clear mandate and responsibilities which are clearly communicated to all management and staff within the company.

The Company's Chief Executive Officer reports to the Board of Directors.

2.1.1.3 Key functions

In order to strengthen its internal control system, the Company has set up the following control functions, in accordance with the Solvency II requirements:

- Actuarial Function (AF)
- Compliance Function (CF)
- Internal Audit Function (IAF)
- Risk Management Function (RMF)

Actuarial Function

The AF is responsible for the calculation of the technical provisions, including the assessment of the data quality and the comparison of best estimates against experience. It provides its opinion in relation to the overall underwriting policy and the reinsurance arrangements of the Company and contributes to the effective implementation of the risk management system, particularly, in respect of the ORSA and MCR/SCR calculations.

Compliance Function

The CF is responsible for ensuring that all actions undertaken by the Company are at all times in compliance with the applicable laws and regulations. It is also responsible to identify, assess and manage the compliance risk that the Company might face and to assess the appropriateness of the procedures and policies in place. In addition, it may suggest organisational and procedural changes to ensure that identified compliance risks are appropriately managed.

The CF is independent of operational activities. It reports directly to the Chief Executive Officer and to the Board of Directors and has also direct access to the Audit Committee and to the Risk Management Committee, in order to escalate issues and act independently from the Management team.

Internal Audit Function

The IAF is independent from any operational functions and its role is to assess the adequacy and effectiveness of the internal control and risk management systems, as well as the effectiveness of other elements of the system of governance. The Internal Audit Function undertakes planned reviews of the Company's processes and their implementation and reports its findings as well as material breaches to the Board. It reports directly to the Audit Committee.

Risk Management Function

The purpose of the RMF is to facilitate the effective implementation of the risk management system of the Company and to design the risk management processes and reporting procedures required to identify, assess, manage, monitor, and report every type of risk inherent in the Company's operations. It is also responsible for monitoring the risk appetite and tolerance limits set by the Board.

In order to facilitate the most effective operation and the objectivity of the risk management system, the RMF is operationally independent from risk-taking functions. The RMF reports directly to the Chief Executive Officer and has direct access to the RMC, the ALIAC and the Board, in order to ensure its operational independence and safeguard its ability to escalate important issues.

2.1.2 Material changes in the system of governance over the reporting period

The Company has in housed the Risk Management Function with effect from 18 July 2022. A Chief Financial Officer has also joined the Company and is part of the Executive Committee, effective 01 July 2022. The ALIAC, when established in 2021, was set up as a management committee. In 2022, the ALIAC became a board committee and the ALIAC Sub-Committee was established as a management committee.

There are no further changes that need to be disclosed.

2.1.3 Remuneration policy and practises for the BoD and employees

The remuneration of all staff employed by the Company complies with the following principles:

- It is in line with the Company's strategy
- It is linked with the Company's structured performance appraisal system
- Ensures fair treatment and provisions of equal opportunities
- It is transparent and adequately disclosed to all members of the staff

The remuneration of the BoD and employees is not based on share options, shares or variable remuneration components and supplementary pension or early retirement schemes.

2.1.4 Fit and Proper requirements

The Company ensures that all persons that effectively run the Company or hold the key functions at all times fulfil the following requirements:

- They have the requisite experience, specialisation, and knowledge for the discharge of their duties and responsibilities (fitness test).
- They act with honestly, reliability, integrity and possess characteristics that promote the culture of compliance in the Company.

A person must satisfy the following criteria to be considered fit and proper and to hold a certain position:

- Competence
- Character
- Diligence
- Honesty
- Integrity
- Judgement to perform his/her duties
- Personal reliability
- Good reputation

2.1.4.1 Fit and proper assessment process

In line with the Company's Fit and Proper's policy, the assessment for an assessed person is conducted as follows:

Fitness

In assessing the fitness of a person, the professional competence and capability will be considered. This assessment is based on the person's previous experience, knowledge, and professional qualifications and should demonstrate due skill, care, diligence, and compliance with the relevant standards for the area or sector worked in.

All individuals must maintain their competence on an ongoing basis for the role they fulfil within the Company. Any professional qualifications applicable to each key function must be in line with the MFSA's requirements.

Propriety

In assessing the propriety of a person, the Company will assess the person's honesty, integrity, reputation, and financial soundness.

The criteria include an assessment of reasons to believe from past conduct that the person may not discharge their duties in line with applicable rules, regulations, and guidelines. Such reasons may arise from criminal antecedents, financial antecedents, and supervisory experience with that person or past business conduct. This approach does not imply that all previous infringements will automatically result in a failure to meet the requirements, but rather that they will be assessed on a case-by-case basis by the Company before an appointment and an application to the MFSA is made.

At the application stage, criminal record checks will be performed for proposed persons.

The Company will also consider whether the person has a debt that remains outstanding or was not paid within a reasonable period and / or has been involved in bankruptcy proceedings or other insolvency arrangements.

On an annual basis, Individuals within the scope of the Fitness and Properness requirements are required to self-certify to Compliance their continuing fitness and propriety.

2.1.5 ORSA Methodology

2.1.5.1 ORSA process

In line with the Company's ORSA policy, ORSA can be defined as the entirety of the processes and procedures employed to identify, assess, monitor, manage and report the short and long term risks the Company faces or may face and to determine the own funds necessary to ensure that the Company's overall solvency needs are met at all times. The ORSA policy is the policy which governs the ORSA process. Strategic decisions such as the introduction of new products, utilisation of additional distribution channels etc. are assessed and evaluated in the light of their effect on the Company's risk situation and risk-bearing capacity.

IVALIFE follows the below steps to implement its ORSA:

- Identify and classify risks, including governance The Company identifies the material risks
 it faces at a particular point in time. This includes risks considered in the SCR formula, as
 well as risks not included in the standard formula such as liquidity, strategic and business
 risks.
- Assessment and measurement of risks through different approaches including stress testing

 the Company collects data, quantifies, and aggregates risks using different approaches
 such as Value at Risk and stress testing. The assessment is done using predefined risk
 metrics.

- Capital Allocation According to its risk profile, the Company determines the necessary additional capital over and above the regulatory minimum SCR.
- Capital planning Based on the capital allocation projections, the Company prepares a capital plan for the following 3 years. Such plans depend on the Company's strategic objectives, financial projections, and assumptions on future economic conditions.
- Stress testing The Company applies stress and scenario testing to the forward-looking capital plan and develops actions that can be taken in unforeseen circumstances in the future.
- Communicate and document the results The Company presents the results of the process to senior management and the Board of Directors and prepares the ORSA report.

2.1.5.2 ORSA Governance

ORSA covers all the operations of the organisation and all business units of the Company. The Board of Directors is the body that bears ultimate responsibility for the ORSA, its application and embedment within the Company's day to day procedures. The roles and responsibilities for the ORSA for each body and function of the company are presented in the table below:

	GOVERNACE				
Responsible Body / Function	Responsibility				
	 Definition of corporate objectives and risk strategies, definition of IVALIFE's risk profile, which will be used as a significant input to ORSA 				
	- Approval of the budget

 Ensure that all actions undertaken by the Company are, at all times, in compliance with all applicable laws and regulations
 Take measures to monitor the compliance of the Company with internal strategies, policies, processes, and reporting procedures
 Identify, assess, monitor, and report the compliance risk exposure of the Company
 Monitor projected revisions of legislation and plans to introduce new regulation and assess their potential impact on the Company, in addition to monitoring the relevant court decisions
 Advise the Senior Management and the BoD of IVALIFE on compliance with the Solvency II Directive
Responsibility
 Compliance and cooperation with the request for collection of data for the implementation of the ORSA and preparation of the ORSA report
 Participation in the risk assessment exercise and support to the RMF
 Provision of information and adoption of all risk management policies and procedures approved by the Board

2.1.5.3 Frequency of the Assessment

The Company currently intends to perform the ORSA annually. Furthermore, the assessment will be performed immediately following any significant changes to the environment that the Company operates. These changes include, but are not limited to:

- Significant changes to the financial and political environment in which the Company operates.
- Significant operational losses.
- Material changes to the new business volumes.
- Planned changes to the operating model of the Company.
- Significant changes in the Company's risk profile.

2.1.6 Internal Control System

2.1.6.1 Description of the Internal Control System

The Company's Internal Control System (ICS) is designed to provide reasonable assurance on the following:

- Effectiveness and efficiency of operations
- Reliability of financial and non-financial information
- An adequate control of risks
- A prudent approach to business
- Compliance with laws and regulations and internal policies and procedures

Effective internal controls help the Company protect and enhance shareholders value and reduce the possibility of unexpected losses or damage to its reputation. The Board is ultimately responsible for overseeing and maintaining the adequacy and effectiveness of the internal controls and risk management systems.

The Internal Control System of the Company is comprised of the following principles:

- Control Environment and Culture: the Board is responsible for promoting a high level of
 integrity and for establishing a culture within a Company that emphasises and demonstrates
 to all levels of personnel the importance of Internal Control. Management is responsible for
 the implementation of the Internal Control culture and principles. All staff members need to
 understand their role in the ICS and be fully engaged in the process.
- Risk Assessment: The Company must regularly assess both the internal and external risks that it faces. Assessment should include the identification and analysis of all the significant risks that an insurance company is exposed to.
- Control Activities and Segregation of Duties: An adequate ICS requires the implementation
 of effective and efficient control activities at all levels of the entity which should be
 implemented in line with the goals and strategies set out by the Board and should involve all
 staff. As an integrated part of the daily business, these activities should be reviewed and
 recorded on an ongoing basis.
- Information and Communication Security: Security controls for the risks inherent in information and communication dissemination and technology must be established, allowing for the effective management of such risks.
- Monitoring: Appropriate monitoring systems must be applied on an ongoing basis, complemented with separate evaluations.

2.1.6.2 Implementation of the Compliance function

The CF is an integral part of the ICS of the Company. The role of the Compliance Function throughout the Company is to pro-actively facilitate the management of compliance risk by identifying, assessing, monitoring, and reporting the compliance risk of the Company. This serves to assist the Company to carry on its business successfully and in conformity with regulatory and ethical standards.

In particular, the CF establishes, implements, and maintains the appropriate processes and activities to:

- Promote and facilitate a corporate culture of integrity and ethical values within the Company.
- Monitor the adherence of the Company to all applicable compliance policies and procedures.
- Identify and assess on an ongoing basis, significant changes in the legal and regulatory environment in which the Company operates and identify the compliance risk that could arise from such changes.

- Formulate proposals for organisational and procedural changes to ensure that identified reputational and compliance risks are appropriately managed.
- Oversee the complaints process and utilising customer complaints as a source of relevant information in the context of its general monitoring responsibilities.

The CF conducts ongoing monitoring activity in accordance with the Compliance Plan, which has been modelled around the business areas of the Company and the risks that the Company may encounter when not complying with its regulatory obligations.

2.1.6.3 Implementation of the Internal Audit

The Company outsources its IAF to Mazars thus ensuring the independence and objectivity from any functions which have operational responsibilities. The IAF reports to the Board through the Audit Committee. The Company confirms that the IAF is independent from all other functions and audited activities of the Company to ensure impartiality.

The Company's Internal Audit Policy establishes and maintains an IAF, the objectives of which are:

- to independently examine and evaluate the adequacy and effectiveness of the Company's risk management, internal controls, and all other elements of the system of governance.
- to issue recommendations based on the results of the internal audit carried out and follow up on them.
- to assess compliance with internal strategies, policies, processes, and reporting procedures.

In order to fulfil its responsibilities effectively and efficiently, the IAF has an unrestricted right to obtain the relevant information. This includes provision of all necessary information, the availability of all necessary documentation and access to all activities and processes of the Company.

2.1.6.4 Internal Audits in 2022

The following is a summary of the internal audits that have taken place during the course of 2022.

Risk Area	H1	H2
Underwriting	X	
Anti-Money Laundering	X	
Framework		
Investments		X
Distribution and Conduct of		X
Business		

Following each audit that was completed, the Audit Committee members were provided with a copy of the internal audits results.

2.1.6.5 Actuarial Function

The primary role of the AF is to ensure that technical provisions are established with respect to all insurance obligations towards policyholders and beneficiaries of the insurance contracts. In particular the AF ensures that the methodologies and assumptions used in the calculation of the technical provisions are appropriate for the specific lines of business of the Company and for the way the business is managed. It assesses uncertainty associated with the estimates made in the calculation of technical provisions and it examines sufficiency, quality, and relevant data to be considered in the reserving process.

When comparing best estimates against experience, it reviews the quality of past best estimates and use the insights gained form this assessment to improve the quality of current calculations. The comparison of best estimates against experience includes comparisons between observed values and the estimates underlying the calculation of the best estimate, in order to draw conclusions on the appropriateness, accuracy and completeness of the data and assumptions used as well as on the methodologies applied in their calculation.

The activities of the AF during 2022 were as follows:

- Carried out the calculation of technical provisions on a quarterly basis in accordance with all relevant regulatory requirements.
- Submitted reports in relation to the above calculations to the BoD.
- Provided modelling assistance for the calculation of Solvency Capital Requirements on a quarterly basis.
- Assessment of data quality.
- Profit testing of new products.
- Expressed opinion on the company's underwriting policy.
- Worked closely with the management and addressed areas of its expertise in relation to the Company's ongoing operations.
- Contributed all financial modelling in relation to risk management activities and the ORSA in particular.

2.1.6.6 Outsourcing

Outsourcing is the use of a third party or intra-group service provider to perform an activity or activities on a continuing basis that would normally be undertaken by the Company itself, now or in the future. Outsourcing will enable the Company to:

- acquire the specialised service of any established service providers in the market.
- help decrease the risk of defection and ensure business continuity especially if there are dependencies / reliance on one internal resource as opposed to outsourcing to an established company with a number of resources that are available.

- be more cost effective.
- reduce operational dependencies.

The purpose of the Outsourcing Policy is to establish the requirements for identifying, justifying, and implementing any outsourcing agreements thus addressing:

- the tasks to be performed and the persons responsible.
- the obligation of the relevant organisational units to inform the risk management, internal audit, compliance, and other functions of facts relevant for the discharge of their duties.
- to determine whether a function or activity is key, critical, or important.
- the procedure to select a service provider of suitable quality and assess its performance and results.
- the procedure to ensure the written agreement with the service provider includes the necessary details.
- the procedure to establish business contingency plans, including exit strategies for outsourced key, critical or important functions or activities.

The following is a list of outsourced agreements:

Function	Service Provider	Person Responsible
Risk Management Function*	Deloitte	Ms. Tania Kyprianidou
Actuarial Function	Deloitte	Mr. Aristos Kyriakides
Appointed Actuary	Deloitte	Mr. Marios Schizas
Internal Audit	Mazars	Mr. Alan Craig
Investment Management Function	Jesmond Mizzi Financial Advisors	Dr. Mark Azzopardi
Investment Management Function	ReAPS	Mr. Michael Tabone

^{*}The Risk Management Function was in-housed in July 2022 and the agreement with Deloitte was kept ensuring an adequate handover. The agreement with Deloitte was terminated in December 2022.

2.1.7 Adequacy of the system of governance

The Board of Directors of the Company is committed to good governance which is vital to creating trust and engagement between the Company and its stakeholders and contributes towards its long-term success. A key objective of its governance framework of the Company is to ensure compliance with applicable legal and regulatory requirements however proportionate to the size

and complexity of the Company's operations. It also applies best practises of corporate governance and corporate administration.

The Company aims to ensure on an ongoing basis that it is a modern, transparent, and competitive organisation. By adopting best practises, the Company achieves a dynamic and effective communication with the Board, management and shareholders leading to a successful implementation of its strategy and a more than adequate framework of corporate governance.

2.1.8 Any Other Information

There is no other material information regarding the system of governance of the undertaking.

3. RISK PROFILE

INTRODUCTION

Solvency II is a risk-based solvency requirement framework which requires the Company to hold capital against underwriting, market, counterparty default and operation risks. The Company aims to maintain sufficient available capital to cover all risks it faces and to satisfy the regulatory requirements at all times.

The Solvency Capital Requirement is the economic capital that should be held to ensure that the Company can meets its obligations to policyholders and beneficiaries with certain probability and should be set to a confidence level of 99.5% over a 12-month period. That requirement limits the chance of financial loss for the following year to 1 in 200-year event. There is a Minimum Capital Requirement, which represents an 85% confidence level and should not be less than 25% of the SCR. The Company uses the standard formula to calculate the SCR, as provided by the European Insurance and Occupational Pensions Authority (EIOPA).

For several sub-modules the calculation of the capital requirement is scenario based.

The capital requirement is determined as the impact of a specific scenario on the level of Basic Own Funds.

OWN RISKS

The Company's overall risk profile is determined by the characteristics of its asset portfolio and the nature of its insurance business. Life business is more geared towards long term savings products, with protection cover being an important element for parts of the portfolio.

The quantifiable risks at this point are Market, Underwriting, Operational and Counterparty Default risks while the non-quantifiable risks are Strategic and Reputational.

3.1.1 Life Underwriting Risk

Life Underwriting Risk is defined as the risk of loss or of adverse change in the value of insurance liabilities, due to inadequate pricing and provisioning assumptions. The Company is exposed to life underwriting risk. Out of the particular constituents of Life Underwriting Risk, those that affect the Company's business are the mortality risk, the lapse risk, the expense risk, and the catastrophe risk.

Mortality Risk is the risk of loss, or of adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of mortality rates, where an increase in the mortality rate leads to an increase in the value of insurance liabilities. Under this risk, the stress scenario concerns an instantaneous permanent increase of 15% in mortality rates used for the calculation of technical provisions.

As a life insurance company, IVALIFE is exposed to the risk of mortality experience being higher than expected which in turn leads to more claims from insurance policies that provide death cover. This has as a result the amount of claim payments to be higher than expected. Higher

mortality experience than expected can arise from misjudgement during assumption setting, inadequate assessment of the risks entailed during underwriting, concentration of risks, etc.

Lapse risk is the risk of loss or adverse change in liabilities due to a change in the expected exercise rates of policyholder options. The relevant options are all legal or contractual policy holder rights to fully or partially terminate, surrender, decrease, restrict or suspend insurance cover or permit the policy to lapse.

IVALIFE is exposed to the risk of lapse rates being higher or lower than expected. The risk of higher-than-expected lapses can incur at the early stage of a policy life cycle, when a policy may lapse before expenses are recovered. The risk of lower-than-expected lapses can incur at the late stage of policies life cycle, when more policies are in-force creating higher claim costs than expected.

The capital requirement under this risk is calculated under three different stress scenarios included in and is taken as the maximum loss arising from them. The three stress scenarios are the following:

- Instantaneous permanent decrease of 50% in the assumed option exercise rates of the
 relevant options in all future years. However, the decrease in option exercise rates, following
 the application of the instantaneous permanent decrease of 50%, shall not exceed 20
 percentage points. The decrease in option exercise rates shall only apply to those relevant
 options for which the exercise of the option would result in a decrease of technical provisions
 without the risk margin.
- Instantaneous permanent increase of 50% in the assumed option exercise rates of the relevant options in all future years. However, the resulting increased option exercise rates, following the application of the instantaneous permanent increase of 50%, shall not exceed 100%. The increase in option exercise rates shall only apply to those relevant options for which the exercise of the option would result in an increase of technical provisions without the risk margin.
- The discontinuance of 40% of the insurance policies for which discontinuance would result in an increase in technical provisions without the risk margin.

Expense risk arises from the variation in expenses incurred in servicing insurance. Under this risk, the stress scenario tested is a combination of the following instantaneous permanent changes:

- An increase of 10% in the amount of expenses taken into account in the calculation of technical provisions.
- An increase of 1% to the expense inflation rate (expressed as a percentage) used for the calculation of technical provisions

Catastrophe risk stems from extreme or irregular events whose effects are not sufficiently captured in the other life underwriting risk sub-modules. IVALIFE is exposed to life-catastrophe risk due to the potential increase in mortality caused by a catastrophic, extreme death event (e.g., pandemic event, plane crash, nuclear explosion, etc.)

The capital requirement for life-catastrophe risk is equal to the loss in the Company's basic own funds that would result from an instantaneous increase of 0,15% to the mortality rates which are used in the calculation of technical provisions to reflect the mortality experience in the following 12 months.

3.1.1.1 Risk mitigation

Portfolio Monitoring:

The Company's management:

- Reviews regular reports on the gross written premium, risks written and incurred claims; and
- Conducts regular detailed profitability analyses and reviews are undertaken both by internal employees and external consultants.

Clear delegation of underwriting and claims

There is a clear delegation of underwriting and claims authorities within the Company and peer review requirements, with the most complex risks and claims requiring review and sign-off by the Chief Executive Officer. This ensures that the risks and claims are assessed by personnel of appropriate experience and expertise and the premium charged reflects the characteristics of each risk and appropriate claim provisions are put in place.

Reinsurance

The Company uses reinsurance to protect against claims volatility. A detailed analysis is undertaken regularly to assess the most appropriate reinsurance structure in accordance to the business, capital, and risk strategies of the Company. External consultants are at times engaged to review the reinsurance structure of the Company and advice on its optimisation and the Actuarial Function issues an opinion on the reinsurance arrangements on an annual basis. The credit rating and the financial condition of the reinsurance counterpart is reviewed on a quarterly basis, so that corrective action is taken in the event of a deterioration in their financial quality.

Market and emerging risks/trends monitoring

The Company closely monitors the market and emerging risks /trends and participates in the discussion to address common market issues faced.

3.1.1.2 ORSA outcome

Underwriting risk was considered as material risk during the ORSA exercised performed. This risk was taken into consideration under the scenarios which indicated that there would be a significant impact on the Company's solvency position, but it would remain well above the minimum regulatory solvency ratio.

3.1.2 Market risk

Market Risk is defined as the risk of loss or of adverse change in the financial situation resulting, directly or indirectly, from fluctuations in the level and in the volatility of market price of assets, liabilities, and financial instruments. It is broken down to interest rate, equity, property, currency, spread and concentration risk.

The Company writes predominantly single premium interest with profits business.

Interest Rate risk exists for all assets and liabilities which are sensitive to changes in the term structure of interest rates or interest rate volatility, whether valued by mark-to-model or mark-to-market techniques. It affects all interest-sensitive assets (such as sovereign and corporate bonds including bond funds using the look-through approach).

Equity risk arises from the level or volatility of market prices for equities. Exposure to equity risk refers to all assets and liabilities whose value is sensitive to changes in equity prices and any assets not shocked in other risk modules.

Property risk arises as a result of sensitivity of assets, liabilities and financial investments to the level or volatility of market prices of property. The stress under the SCR standard formula is an instantaneous decrease of 25% on the value of property investment.

Currency risk arises from changes in the level of volatility of currency exchange rates. All investments with exposure to non-euro currencies are stressed under this risk. These include all non-euro denominated investments funds or of funds whose underlying stocks or bonds are non-euro denominated even if the actual Fund is denominated in euro.

Two scenarios are examined. One where there is an instantaneous rise in the value of 25% of the stressed currency against the local currency and one where there is an instantaneous fall in the value of 25% of the stressed currency against the local currency. The maximum value resulting from the above stresses is the capital requirement.

Spread risk results from the sensitivity of the value of assets, liabilities, and financial instruments to changes in the level or in the volatility of credit spreads over the risk-free interest rate term structure. In order to estimate the capital required under this risk module, the shock applied to the relevant assets is the immediate effect on the net value of assets and liabilities expected in the event of an instantaneous decrease of values of these assets due to the widening of their credit spreads. The Company applies this risk to all assets stressed under the interest rate risk.

Concentration risk is the risk of accumulating investment exposures with the same counterparty. It does not include other concentration types (such as geographical area, industry sector, etc). It applies to assets considered under equity, property and spread risk modules, but excludes assets covered under the counterparty default risk.

3.1.2.1 Risk mitigation

Market Risk Management Policy and Prudent Person Principle

The policies and procedures for the management of market risk are documented in the Company's risk Management Policy. The main objective is to ensure that all investment activities are consistent with the Company's investment policy and with the Prudent Person Principle.

In order for the Company to safeguard that investment decisions are taken based on the provisions of the Prudent Person Principle it has established an Asset Liability Investment Advisory Committee. Committee meetings are held on a quarterly basis.

In particular, relevant limits have been set within the Company's risk appetite and tolerance limits statement and are monitored by the RMF and reported to the Senior Management and relevant Board committees (Risk Committee) and to the Asset Liability Investment Advisory Sub-Committee Members (Management Committee). These include restrictions on own assets in relation to duration, asset classes, counterparty, country, concentration, and currency risk exposures.

The Company collaborates with reputable external investment managers. The performance and investment process of the chosen fund managers is closely monitored, and the Company ensures that is able to properly assess and report the assets under management and perform the required solvency capital calculations.

3.1.2.2 ORSA outcome

Market risk was considered as a medium risk during the risk assessment exercise performed in 2022. Two specific tests were performed to understand the implications should such scenarios crystallize. In both instances, the tests indicated that there would be an impact on the Company's solvency position but would remain well above the set risk appetite.

3.1.3 Counterparty Default Risk

Counterparty Default Risk refers to the risk of loss due to failure of a counterparty to meet a financial or contractual obligation. This category of risk aims to reflect possible losses due to unexpected default or deterioration in the credit standing of the Company's counterparties and debtors.

The following categorisation is applied:

- Type 1 exposures are the exposures which may not be diversified and where the counterparty is likely to be rated and these include the Company's exposures to its reinsurance balances, cash at bank (current accounts) and intercompany accounts.
- Type 2 exposures are the exposures which are usually diversified and where the counterparty is likely to be unrated. These include the Company's exposure to its intermediary balances, as well as premiums due from policyholders.

3.1.3.1 Risk mitigation

The Company applies the following risk mitigation techniques:

- Conducts due diligence on the financial condition of the counterparties before entering into agreement with them.
- Reviews of the credit rating and the financial condition of the key counterparties.
- Monitors the premium debt balances.

The Company has also established procedures for the management of credit risk. In particular the list of controls for managing credit risk include:

- credit rating restrictions to ensure high credit quality assets.
- counterparty limits are set as part of the Company's risk appetite which is frequently monitored by the Risk Management Function.

3.1.3.2 ORSA outcome

During the risk assessment performed in 2022 it was concluded that the Company had no material counterparty default risk exposure.

3.1.4 Operational Risk

Operational risk is defined as the risk of loss arising from inadequate or failed internal processes, people, and systems, or from external events. The operational risk module is designed to address operational risks to the extent that these have not been explicitly covered in other risk modules.

Even though the risk is measured using the Standard Formula (provided by EIOPA), it is widely accepted that in reality Operational Risks are significant risks difficult to measure and identify. The risks within this category are associated with the specific processes associated with the conduct of life insurance business and they include:

- Underwriting process risk the company might face financial loss related to selection and approval of risks to be insured.
- Pricing process risk the company might face financial losses due to insufficient premium charged for risks undertaken (the outcome of a failed pricing procedure will also impact mortality and expense risk, captured under the life underwriting risk).
- Product design risk the company might be exposed to events not anticipated in the design and pricing of its life insurance contracts.

Furthermore, a series of workshops have been conducted with the Company's responsible function holders. The workshops included:

- A brief overview of the risk management policy with a more detailed reference to the sections that are relevant to the respective department/function.
- Walkthrough of the processes of each department and identification of the key risk areas.
- Discussion on the measurement and risk mitigation of each identified risk.
- Establish a process for collecting, evaluating, monitoring, and reporting operational losses.

3.1.4.1 Risk mitigation

Operational risk covers a wide range of processes, procedures and systems across the Company, thus appropriate risk mitigation techniques are applied depending on the process or system. These include but are not limited to:

- Regular Internal Audit and external consultants' reviews of the processes, systems, and procedures.
- Policies and procedures are documented and available to all employees.

- Regular attendance to trainings and seminars both to further develop the employees' knowledge and capabilities (reducing people's risk) and to ensure the Company keeps abreast of any regulatory or technical developments (reducing regulatory risk).
- Peer review of material work and appropriate underwriting, claims and other authority limits in place.
- Business continuity and disaster scenario planning.
- Standard templates/policy wordings.

The continued effectiveness of the risk mitigation techniques and controls is monitored through the risk register. The risk register is reviewed and updated continuously as new risks and/or failures in controls are identified.

3.1.4.2 ORSA outcome

As part of the ORSA process a reverse stress test was carried combining multiple factors including the materialisation of an operation event. In view of its inclusion as part of the reverse stress test, the solvency ratio breached the 100% limit however it then increased to above 100% due to a planned capital injection.

3.1.5 Other material risks – Strategic and Reputational Risks

The Company's strategy is defined as the long-term plan which enables it to achieve its business objectives. Strategic risk is the risk that unexpected events result in the Company's objectives not being achieved or materially delayed or that inappropriate objectives lead to missed business opportunities. In order to mitigate its exposure to strategic risk the Company is diligent in preparing its financial plans which are ambitious yet deemed to be achievable. Careful consideration is given to both new business estimates as well as assumptions on future experience which are approved by the BoD.

The risk is influenced by a number of different factors including:

- Consumer preferences, demand, and sales volumes
- Per-unit price and input costs
- Competition
- Overall economic climate

Reputational risk is the risk of potential loss through the deterioration of its reputation or standing due to a negative perception of the Company's image among customers and counterparties. As a new established company, IVALIFE aims to build its reputation, which will also help with business sales and thus company performance.

IVALIFE has started its operations in a challenging environment with the restrictions of the pandemic. Moreover as a result of the Russian/Ukraine war, the economic scenario has not rebounded and performed in negative territorty. Nevertheless, the insurance portfolio of IVALIFE shows steadily expansion, which is an indicator that IVALIFE has started to gain the customers trust and building a good reputation.

Similarly, with the strategic risk, this risk is not captured by the standard formula, hence it is subject to qualitative assessment.

To gain the support of the stakeholders, the Company must continue delivering on the following:

- Products and services that customers both buy and recommend.
- An appropriate marketing strategy which engages the media.
- Employees who can deliver on its strategy.

3.1.5.1 Risk Mitigation Techniques

The Company continuously monitors its plan (by comparing performance results with expected) and take corrective actions where it is considered necessary. Specifically, and with regards to its With Profits business, IVALIFE's has updated the product's features to make the product more marketable and help increase its sales capacity and thus narrow down the variance.

The Company continues to study the market developments to ensure that its product offerings covering the needs of both current and prospective customers.

With respect to Reputational Risks, the Company closely monitors the performance of distributors and tracks any complaints received to ensure that the root cause is identified. This allows complaints to be turned into lessons learned.

3.1.5.2 ORSA outcome

During the risk assessment exercise performed in 2022, it was concluded that the Company had material exposure to strategic risk mainly due to the impact form the external environment (e.g., Russian/Ukraine war resulting in economic downturns and inflationary pressures). Reputational risk was also captured as part of the stress test whereby it was assumed that the projected business volumes were not achieved. The results of the stress test showed a drop in solvency ratio during the projected period yet remaining well above the minimum regulatory requirements.

3.1.6 Liquidity Risk

Liquidity risk is defined as the risk that the Company is unable to realise investments and other assets (or realise them at excessive cost) in order to settle its financial obligations when they fall due.

The liquidity risk of the Company is generally very low as:

- A significant proportion of the assets is invested in short-terms products, including cash and bank deposits.
- Most of the assets held (corporate bonds, government bonds, equities) are highly tradeable securities which enables fast and low-cost liquidation of assets.

Sources of cash in and cash out flows such as insurance receivables, claims (deaths, surrenders), expenses etc., are diversified and to a large extent independent. This risk concentration within liquidity risk is limited.

The composition of the asset portfolio is not expected to change over the business planning horizon in a way that would introduce liquidity risk.

The Company's liquidity requirements are continually monitored, and risk appetite limits are assessed and recorded by the RMF on a quarterly basis.

3.1.7 Any Other Information

The Company aims to maintain its risk profile within its risk appetite and in accordance with regulatory requirements. The set risk appetite and tolerance limits are monitored by the Risk Management Function with the use of the Risk Appetite dashboard, which is reported on a quarterly basis through the Risk Management report to the Senior Management, Risk Committee and Board, indicating any violations and remedial actions taken or planned to be taken.

4. VALUATION FOR SOLVENCY PURPOSES

ASSETS

4.1.1 Value of assets

The Company held the following assets as of 31st December of 2022 (including a comparison with 2021):

ASSETS SII				
	YE 2022 €'000	YE 2021 €'000		
Deferred acquisition costs	-	-		
Intangible assets	-	-		
Deferred tax assets	-	416		
Property, plant & equipment held for own use	24	31		
Right-of-use-asset	-	7		
Investments (other than assets held for index-linked and unit-linked contracts)	13,551	8,755		
Reinsurance asset	158	246		
Insurance and intermediaries' receivables	262	105		
Reinsurance receivables	(123)	(51)		
Receivables (trade, not insurance)	1	22		
Cash and cash equivalents	622	196		
Total assets	14,496	9,729		

4.1.2 Description of bases, methods and main assumptions used for valuation for solvency purposes

The valuation principles applied to these assets are consistent with those used in the IFRS accounts, notably:

- Property, plant, and equipment: Items of property, plant and equipment are measured at cost less accumulated depreciation and any accumulated impairment losses. Cost includes expenditure directly attributable to the acquisition of the asset.
- Right-of-use asset: The right-of-use asset is initially measured at cost, which comprises the
 initial measurement of the lease liability, any lease payments made at or before the
 commencement date, any initial direct and restoration costs incurred less any lease incentive
 received, if any. Lease arrangements are not material.
- Bonds, Equities and Collective Investment Schemes

 The Company's financial assets are classified as financial assets at fair value through profit or loss. Net gains and losses, including any interest or dividend income, are recognised in profit or loss. It should be noted that the Company limits its equity purchases to those instruments that are listed on the most recent MSCI all world index. Furthermore, all debt instruments held are actively traded on the exchange.
- Cash and cash equivalents These are measured at face value.

Reinsurance Asset represent the difference between Gross and Net provisions. A reduction
of reinsurance recoverables has been made to allow for expected losses due to the possible
default of a counterparty.

In 2021, the Company recognized a Deferred Tax Asset ('DTA'). Deferred tax is recognised, using the liability method, in respect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. Within the Solvency II balance sheet, deferred tax is adjusted to take into account differences in the SII valuation of assets and liabilities as compared to IFRS multiplied by the effective tax rate (see table below). DTAs are recognised to the extent that the Company intends to offset past tax losses already realised against future tax profits. This way, the insurer pays less or no tax on these future profits. In 2022, the DTA has been limited to the Deferred Tax Liability arising on Solvency II Own Funds.

4.1.3 IFRS vs Solvency II

IFRS VS SII YE2022						
Asset	IFRS €'000	Solvency II €'000	Major Differences			
Deferred acquisition costs	1,317	-	DAC are valued at zero on a SII valuation basis			
Intangible assets	1,465	-	Intangibles are valued at zero on a SII valuation basis			
Deferred tax assets	750	-	SII own funds exceed IFRS equity giving rise to a reduction in Deferred tax assets of €750k. For SII purposes, the company has set off the resultant deferred tax liability against its available tax losses such that Deferred tax is nil for SII.			
Property, plant & equipment held for own use	24	24	-			
Investments (other than assets held for index-linked and unit-linked contracts)	13,229	13,551	Difference arises as a result of cash held with DPMs and accrued interest classified under 'Investments' under SII			
Reinsurance Asset	405	35	Lower Reinsurance Recoverables are generated under SII valuation basis as prudence margins are removed from the assumption basis through the shift to a best estimate approach. The deferred reinsurance is disallowed under SII.			
Insurance and intermediaries' receivables	262	262	-			

Receivables (trade, not insurance)	485	1	Cash held with DPMs classified under 'Investments' under SII, disallowed prepayments and accrued interest classified under 'Investments' under SII
Cash and cash equivalents	623	623	-
Right-of-use asset	-	-	-
Total assets	18,560	14,496	

TECHNICAL PROVISIONS

4.1.4 Value of Technical Provisions (amount of Best Estimate and Risk Margin)

The value of the Company's technical provisions is equal to the sum of the best estimate and the risk margin, which are calculated separately. The table below shows the value of technical provisions as at 31 December 2022 both gross and net of reinsurance (RI) recoverable by line of business.

YE2022				
	Insurance with profit	Other Life	Total	
	participation	Insurance		
Gross Best Estimate [A]	10,206	(5,337)	4,869	
Risk Margin [B]	729	368	1,097	
Gross Technical Provisions [C=A+B]	10,935	(4,969)	5,966	
RI Recoverable [D]	-	(123)	(123)	
Net Technical Provision [C-D]	10,935	(4,846)	6,089	

4.1.5 Description of the bases, methods and main assumptions used

4.1.5.1 Investment contracts with profit participation

For the investment contracts with profit participation policies the best estimate liability (BEL) has been derived from the accumulated account value of each policy as at 31.12.2022 and the present value of the expected future cashflows related to these policies. The cash flow projections are performed on a best estimate basis (i.e., without any prudence margins) and discounting is performed using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

4.1.5.2 Other Life Insurance (excl. Group Life Insurance)

The BEL for Other Life Insurance is calculated as the expected present value of all future cash flows arising in relation to other life insurance policies (premiums, expenses, claims etc.). The cash flow projections are performed on a best estimate basis (i.e., without any prudence margins) and discounting is performed using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

On top of the above, any outstanding claims as at the valuation date are also added to the BEL.

4.1.5.3 Other Life Insurance (Group Insurance)

4.1.5.3.1 Claims provision

The provision for claims outstanding relates to claim events that have already occurred, regardless of whether the claims arising from those events have been reported or not. Thus, the components of the Claims Provision are the Outstanding Case Estimates and the Incurred But Not Reported (IBNR). Under Solvency II, the reserves are discounted to allow for the time value of money using the EUR risk free curve (with no volatility adjustment) as at the valuation date, published by EIOPA.

4.1.5.3.2 Premium provision

The calculation of the best estimate of the premium provision relates to all future cashflows arising from future events, over the remaining duration of unexpired policies. Such cashflows mostly relate to future claims, administration expenses and reinsurance cost.

4.1.6 Risk Margin

The Risk Margin is designed to ensure that the value of technical provisions is equivalent to the amount that a third undertaking would be expected to require in order to take over and meet the Company's insurance obligations. The risk margin is calculated by determining the cost of providing an amount of eligible own funds equal to the SCR necessary to support the Company's insurance obligations over their lifetime thereof. This rate, called the Cost-of-Capital, is prescribed at 6%, as published by EIOPA. It should be noted that the Company implemented the suggested methodology by EIOPA without any significant simplifications.

4.1.7 Recoverables

Reinsurance Asset represent the difference between Gross and Net provisions. A reduction of reinsurance recoverables has been made to allow for expected losses due to the possible default of a counterparty.

4.1.8 Description of the level of uncertainty associated with the value of technical provisions

The Company makes estimates and assumptions that affect the reported amounts of assets and liabilities within the next financial year. Estimates and judgements are frequently re-evaluated and based on product assessment of historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Uncertainty relates primarily to how future actual experience will differ from the best estimate assumptions used to calculate the technical provisions. The key assumptions are interest rates, lapse rates, mortality rates and expense assumptions. The assumptions will be reviewed at least annually, to ensure continued suitability. The balance sheet is also affected by volatility in the financial markets, for example in the equity and bond markets. Where assets held on the balance sheet are affected, this may increase the value of technical provisions due to the cost of covering guarantees on the with-profits portfolio.

Note 4 to the Audited Financial statements, describes critical accounting estimates further. In relation to expense assumptions, as stated within the said note, the Company has derived per policy expenses considering a future, more stable level of in-force policy volumes. Should per policy expenses differ by +10%, the impact on own funds would be £240k before tax.

Given that the Company is in its initial years of operation actual experience to date is very limited. New estimates are made each subsequent year to reflect the current long-term outlook.

4.1.9 Quantitative and qualitative explanation of any material differences between the bases, methods and main assumptions used for the valuation for solvency purposes and for IFRS.

The following table compares the net technical provisions under Solvency II and under IFRS.

YE 2022					
Net Technical Provisions/Reserves	Solvency II	IFRS	Difference		
	€,000	€'000	€.000		
Insurance with profit participation	10,206	11,126	(920)		
Other life insurance	(5,214)	546	(5,760)		
Risk Margin	1,097	-	1,097		
Total	6,089	11,672	(5,583)		

Lower technical provisions are generated under the Solvency II basis as prudence margins are removed from the assumption basis through the shift to a best estimate approach. Moreover, the removal of zeroization of negative reserves and allowance of future profits, result in further reduction of the net technical provisions under Solvency II.

The inclusion of the Risk Margin in the Solvency II technical provisions increase SII reserves whereas changes in the economic outlook, such as the high yield environment, resulted in a decrease in Solvency II technical provisions compared to IFRS.

4.1.10 Statement on whether the matching or volatility adjustment referred to in Article 77d of Directive 2009/138/EC is used

The Company has not used the matching or volatility adjustment referred to in Article 77d of Directive 2009/138/EC.

4.1.11 Statement on whether the transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC is applied

The Company has not used the transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC.

4.1.12 Statement on whether the transitional deduction referred to in Article 308d of Directive 2009/138/EC is applied

The Company has not used any of the following the transitional deduction referred to in Article 308d of Directive 2009/138/EC.

4.1.13 Material assumption changes

No changes in assumptions have been occurred compared to last year as IVALIFE commenced operations on 1st March 2021.

VALUATION OF OTHER LIABILITIES

4.1.14 Value of other liabilities

The table below sets out the value of the other liabilities as at 31st December 2022:

OTHER LIABILITIES SII YE2022				
Liabilities	€.000			
Insurance & intermediaries payables	114			
Reinsurance payables	89			
Payables (trade, not insurance)	765			

4.1.15 Description of the bases, methods and main assumptions used for their valuation for solvency purposes

4.1.15.1 Insurance and intermediaries' payables

Insurance and intermediaries' payables at 31 December 2022 total €114k.

4.1.15.2 Reinsurance payables

As at 31 December 2022, the balance owed to reinsurers was €189k. This balance is in respect of reinsurance agreements that were in force at the reporting date.

4.1.15.3 Payables (trade, not insurance)

Payables (trade, not insurance) relate to balances owed in respect of other services received by the Company; no estimation methods, adjustments for future value or valuation judgements are required for these balances. The total for payables (trade, not insurance) as at 31 December 2022 was €765k.

Payables (trade, not insurance)	€'000
Other payables	339
Accrued expenses	426

4.1.16 Quantitative and qualitative explanation of any material differences with the valuation bases, methods and main assumptions used for the valuation for solvency purposes and for IFRS

OTHER LIABILITIES: IFRS VS SII YE2022					
Liabilities	IFRS €'000	Solvency II €'000	Major Differences		
Insurance & intermediaries payables	114	114	-		
Reinsurance payables	189	89	-		
Payables (trade, not insurance)	765	765	-		

4.1.16.1 Deferred Tax Liability (DTL)

As at 31 December 2022 the Company does not have any Deferred Tax Liabilities.

ALTERNATIVE METHODS FOR VALUATION

There are no alternative methods that are used by the Company.

ANY OTHER INFORMATION

No other material information regarding the valuation of assets and liabilities for solvency purposes.

5 CAPITAL MANAGEMENT

OWN FUNDS

The objective of capital management is to maintain, at all times, sufficient own funds to cover the SCR and MCR with an appropriate buffer. These should be of sufficient quality to meet the eligibility requirements in Article 82 of the Delegated Regulation. The Company holds regular meetings of senior management and BoD, at least quarterly, during which the ratio of eligible own funds over SCR and MCR are reviewed. As part of own funds management, the Company prepares annual solvency projections and reviews the structure of own funds and future requirements. The business plan, which forms the base of the ORSA, contains a three-year projection of funding requirements and this helps focus actions for future funding.

An analysis of the Company's Own Fund by tier is shown below:

	Own Funds Co	mparison
	YE 2022 (€ ′000)	YE 2021 (€ ′000)
Share Capital	9,500	7,500
Reconciliation reserve	(1,939)	(1,799)
An amount equal to the value of net deferred tax assets	-	416
Total Basic Own Funds	7,561	6,117
Tier 1	7,561	5,701
Tier 2	-	-
Tier 3	-	416

The Company's ordinary share capital and reconciliation reserve are all available as tier 1 unrestricted own funds as per Article 69(a) (i) of the Delegated Regulation.

Reconciliation reserve

The reconciliation reserves equal to the excess of assets over liabilities less other basic own funds as at the reporting date. Whilst some of the approaches and techniques applied under Solvency II are similar to those followed under the IFRS basis, there are other areas where there are some differences (in terms of methodologies and assumptions). Some of the most important requirements are listed below:

- Removal of margins within the best estimates in an effort to provide a "true" best estimate for solvency purposes.
- Introduction of the principle of a market consistent basis and calculation of Risk Margin.
- Allowance of negative reserves.
- Discounting using an EIOPA provided term structure as opposed to discounting using the rate implied by the assets which back the liabilities

Own funds

The Company has also an amount as tier 3 own funds as per Article 76 of the Delegated Regulation in the comparative period. As outlined in the earlier section, the Solvency II own funds exceed IFRS equity giving rise to a reduction in Deferred tax assets. For Solvency II purposes, the company has set off the resultant deferred tax liability against its available tax losses such that deferred tax is nil for Solvency II.

The Company's total own funds are eligible to cover its Solvency capital requirement whereas only the tier 1 unrestricted and available to cover the Minimum Capital Requirement.

IFRS EQUITY VS OWN FUNDS

The table below shows the difference between own funds as shown in the financial statements and the Solvency II own funds

	Own F	unds
	YE 2022 (€'000)	YE 2021 (€'000)
Total own funds as per Financial Statements	5,587	5,898
Deferred Acquisition Costs	(1,317)	(534)
Intangible assets	(1,465)	(1,015)
Prepayment	(163)	-
Reinsurance deferral	-	(73)
Change in valuation of Technical Provisions	5,938	1,998
Change in valuation of Reinsurance Technical Provisions	(269)	-
Deferred Tax Movement	(750)	(157)
Total basic own funds	7,561	6,117

SOLVENCY CAPITAL REQUIREMENT AND MINIMUM CAPITAL REQUIREMENT

The Company's Solvency Capital Requirement based on the Solvency II standard formula methodology for the financial year end 2022 (including a comparison with 2021) is shown below:

	SCR and MCR	
	YE 2022 (€'000)	YE 2021 (€'000)
Total eligible own funds to meet the SCR	7,561	6,117
Solvency capital requirement	3,888	2,586
Ratio of Eligible own funds to SCR	195%	235%
Total eligible own funds to meet the MCR	7,561	5,701
Minimum capital requirement	4,000	3,700
Ratio of Eligible own funds to MCR	189%	154%

A further analysis of the Company's SCR for the year 2022 (including a comparison with 2021) is shown below:

	SCR Analysis	
	YE 2022 (€'000)	YE 2021 (€'000)
Market risk	1,928	1,546
Counterparty risk	204	194
Life Underwriting risk	2,325	1,087
Diversification effect	(1,016)	(658)
Basic solvency capital requirement	3,441	2,169
Operational risk	446	417
Solvency capital requirement (Theoretic)	3,888	2,586
Solvency capital requirement (Revised)	4,000	3,700

The increase in the solvency capital requirement is a result of the increase in business generated. It should be further noted that during the year, a capital injection of €2m was completed.

At the end of both 2021 and 2022, the calculated Solvency Capital Requirement was below the required Minimum Capital Requirement. According to Article 129 of Directive 2009/138/EC, the Company's SCR should be at least equal to the MCR. Based on this, the Company is required to hold as a minimum the MCR of &4m (2022). It should be noted that the MCR has increased from &3.7m to &4m following the publication of EU Notice 2021/C423/12.

5.1.1 Simplifications

The Company has not used any simplifications in calculating any of the modules of the SCR.

5.1.2 Undertaking – specific parameters

The Company has not used undertaking – specific parameters for any of the parameters.

5.1.3 Any material changes to the SCR and MCR over the reporting period and the reasons for any such change

No changes in assumptions have been occurred compared to last year as IVALIFE commenced operations on 1st March 2021.

5.1.4 Minimum capital requirement

The table below shows the inputs into the MCR calculation as at 31 December 2022. It should be noted that the Absolute Floor of the Minimum Capital Requirement (AMCR) is prescribed by EIOPA and stated in Euros.

	MCR		
	YE 2022 (€ ′000)	YE 2021 (€'000)	
AMCR	4,000	3,700	
Linear AMCR	(363)	(42)	
SCR	3,888	2,586	
Combined MCR	972	646	
MCR	4,000	3,700	

LOSS ABSORBING CAPACITY OF DEFERRED TAX ADJUSTMENT AND DEFERRED TAX ASSET

The Company accounts for a deferred tax asset pertaining to unabsorbed tax losses within the IFRS balance sheet. This is duly adjusted downwards to cater for differences in own funds as per SII versus equity under IFRS, as further described in sections above. The Company expects to utilise these deferred tax assets against future profits in the short to medium term based on the Company's latest business projections of future taxable profits. There are currently no time limits relating to the carry-forward of unused tax losses. The Company has not taken an allowance for LACDT.

NON-COMPLIANCE WITH THE MCR AND NON-COMPLIANCE WITH THE SCR

The Company has maintained capital sufficient to meet its MCR and SCR throughout the year 2022.

DURATION BASED EQUITY RISK SUB MODULE OPTION

The equity risk sub module is not used by the Company for the calculation of its Solvency capital requirements.

INTERNAL MODEL

An internal model is not used by the Company for the calculation of its Solvency Capital Requirements and its Minimum Capital Requirements.

ANY OTHER INFORMATION

There is no other material information regarding the capital management of the undertaking during the year 2022.
